

Properly charging your 5190 Chromebook

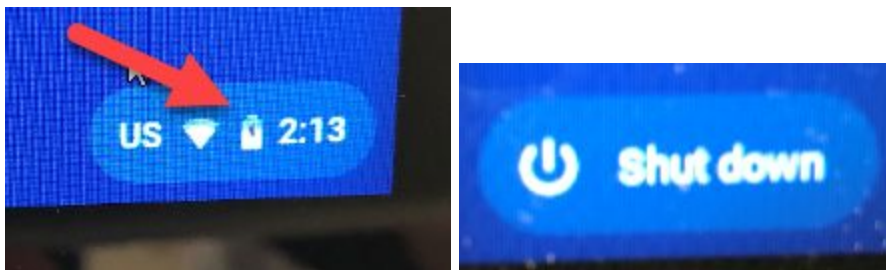

Never let your device get below 20% charge

Plug charger into wall, NOT a power strip

1. With unit closed, plug in charger on side where power button is.

2. Watch the indicator light on the CB.
3. If the light blinks orange or stays orange, then leave the lid closed for at least 30 minutes and then open lid (wait at least 10 seconds for the LCD to respond)
4. Device should come on and you can check the battery level and if it is charging (lightning bolt).

5. If below 20%, touch the Shut Down, on the screen, close the lid and let the device charge fully. The indicator light will turn white when fully charged.

Never leave your Chromebook charger where someone can trip over it, an animal can chew on it or it can get damaged.
